weather_app Microservice

- The weather_app microservice provides two endpoints to the client:
  a. /info:
     i. Returns information about the service in plain text
  b. /weather:
     i. Returns the weather for the requested city in json format
- Data source for the weather:
  https://openweathermap.org/current
  a. Review the service
  b. Make note of the input parameters
